Aim – Cost Analysis of DEFINE FLAIR

- To assess the health economic implications of the use of iFR or FFR to guide coronary revascularization.

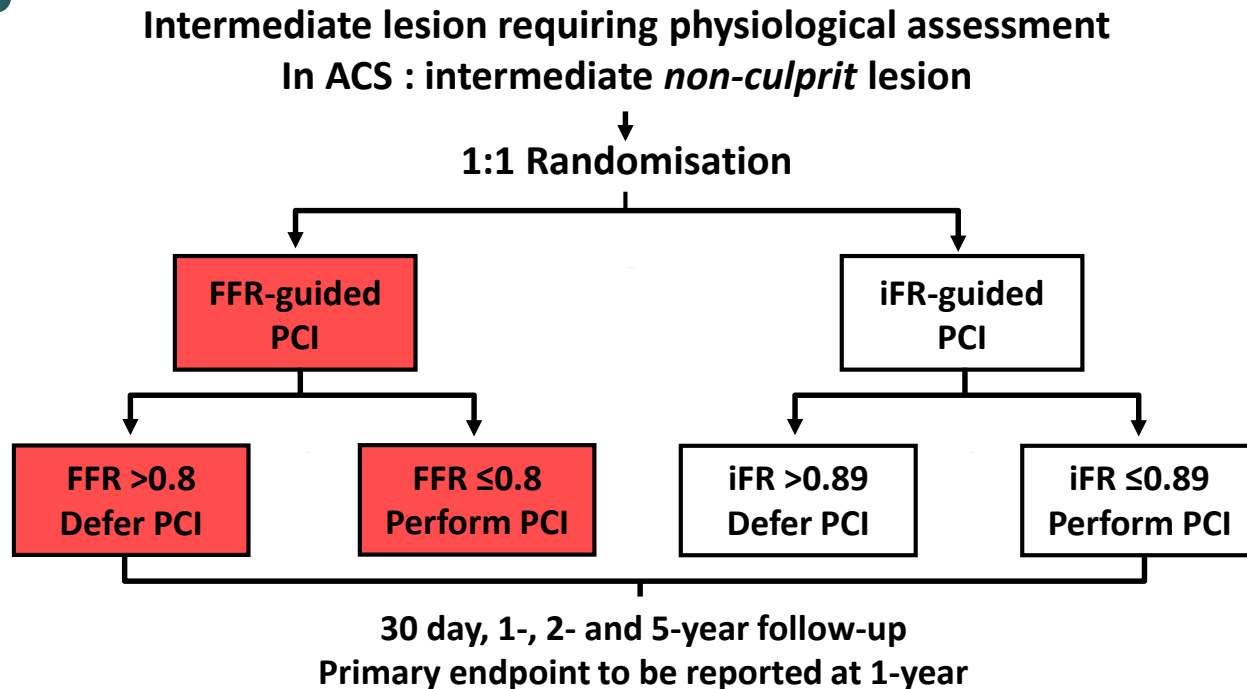

Background

- iFR is a pressure wire alternative to FFR
 - Vasodilator-free (e.g. Adenosine, ATP)
 - Patient friendly
 - Streamlined workflow

Study Design

Non-inferiority design
with Primary Endpoint
MACE at 1 year

DEFINE FLAIR. <https://clinicaltrials.gov/ct2/show/NCT02053038>.

MACE definition

- MACE was defined as composite endpoint of
 - Death
 - Non-fatal myocardial Infarction
 - Unplanned revascularization

Primary endpoint – iFR equivalent to FFR

iFR guided revascularization reduces procedure time

* Threshold for reduction in median time ($p=0.001$)

Event rates in deferred patients

Methods

- Healthcare costs and outcomes with iFR and FFR over one year using patient-level data from DEFINE-FLAIR.
- Costs were estimated from a US healthcare payer perspective, with micro-costing for the index catheterization and Medicare costs for subsequent revascularizations, ambulatory care, and adverse events.

Methods (2)

- Outcomes included the mean number of major Adverse Coronary Events (MACE) and Quality Adjusted Life Years (QALYs).
- Cost-effectiveness scatterplots and probabilities were estimated by non-parametric bootstrapping.

Baseline Characteristics

Patient characteristic †	iFR Group (N=1147) *		FFR Group (N=1179) *	
Age, years	1147	65.4 (10.7)	1179	65.2 (10.5)
Sex, male	889 / 1147	(77.5%)	884 / 1179	(75.0%)
BMI, kg/m ²	1139	27.8 (5.0)	1161	27.5 (5.0)
Diabetes	355 / 1139	(31.2%)	357 / 1171	(30.5%)
Current smoker	222 / 1107	(20.1%)	243 / 1121	(21.7%)
Previous MI	330 / 1136	(29.1%)	349 / 1158	(30.1%)
Previous PCI	450 / 1145	(39.3%)	490 / 1162	(42.2%)
Disease type				
Stable disease	916 / 1134	(80.8%)	957 / 1172	(81.7%)
Acute coronary syndrome	170 / 1134	(15.0%)	174 / 1172	(14.9%)
STEMI (>48 hours ago)	48 / 1134	(4.2%)	41 / 1172	(3.5%)

Baseline Characteristics

Patient characteristic †	iFR Group (N=1147) *		FFR Group (N=1179) *	
CCS angina class				
0 no symptoms	203 / 1061	(19.1%)	225 / 1057	(21.3%)
I with strenuous exertion	327 / 1061	(30.8%)	283 / 1057	(26.8%)
II with moderate exertion	343 / 1061	(32.3%)	335 / 1057	(31.7%)
III with mild exertion	119 / 1061	(11.2%)	146 / 1057	(13.8%)
IV symptoms at rest	69 / 1061	(6.5%)	68 / 1057	(6.4%)
Congestive heart failure	66 / 1106	(6.0%)	64 / 1111	(5.8%)
NYHA class				
I no limitation	18 / 57	(31.6%)	15 / 63	(23.8%)
II slight limitation	26 / 57	(45.6%)	31 / 63	(49.2%)
III marked limitation	12 / 57	(21.1%)	14 / 63	(22.2%)
IV severe limitation	1 / 57	(1.8%)	3 / 63	(4.8%)

Costs over one year

Resource	Mean cost per person, 2017 US\$ (95% Confidence Interval)

Health Outcomes over 1 year

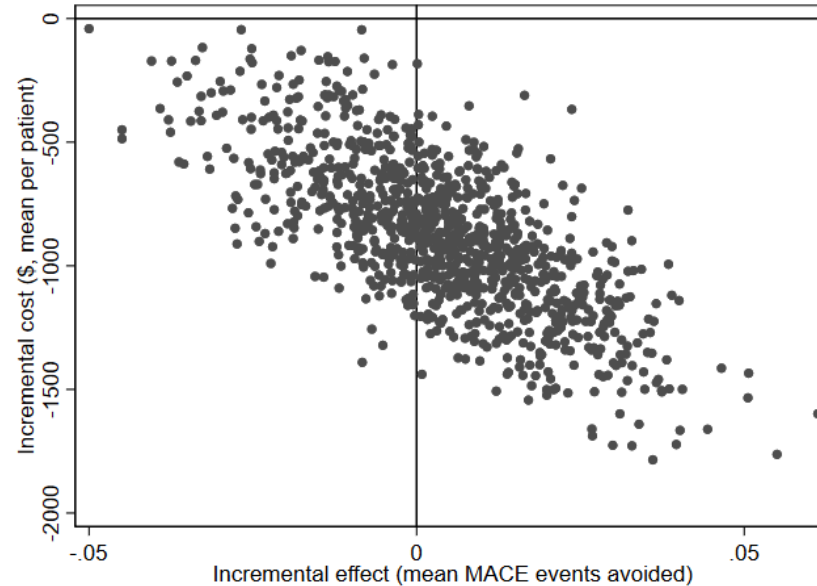

Outcome	iFR Group (N=1147) ^a		FFR Group (N=1179) ^a	
Procedural symptoms				
Patients with symptoms – n/N (%)	32/1126	(2.8%)	359/1157	(31.0%)
Symptom grade – N, median (IQR)	31	4 (3 to 7)	357	5 (3 to 6)
MACE – mean events per person (95% CI) ^b				
Unplanned PCI	0.039	(0.029 to 0.052)	0.046	(0.034 to 0.060)
Unplanned CABG	0.003	(0.001 to 0.009)	0.008	(0.003 to 0.014)
Non-fatal MI	0.027	(0.018 to 0.038)	0.026	(0.018 to 0.037)
All-cause mortality	0.019	(0.012 to 0.029)	0.011	(0.006 to 0.019)
Total MACE	0.089	(0.073 to 0.108)	0.091	(0.074 to 0.110)
Quality of life – mean per person (95% CI) ^c				
EQ-5D utility score at 1 month	0.842	(0.832 to 0.851)	0.844	(0.835 to 0.853)
EQ-5D utility score at 1 year	0.839	(0.829 to 0.849)	0.839	(0.830 to 0.849)
QALYs over 1 year	0.835	(0.825 to 0.844)	0.838	(0.829 to 0.847)

Effect of iFR on costs and outcomes over 1 year

	Mean difference iFR – FFR (95% CI)			
	Unadjusted		Adjusted ^d	
Healthcare costs (2017 US\$ per patient) ^a				
Index procedure: assessment	-75	(-104 to -47) **	-76	(-105 to -48) **
Index procedure: angioplasty	-139	(-324 to 46)	-185	(-372 to 2)
Planned CABG	-294	(-628 to 40)	-332	(-665 to 0) *
Ambulatory care	-52	(-158 to 54)	-34	(-127 to 59)
Hospital care	-241	(-783 to 301)	-219	(-770 to 332)
Total cost	-801	(-1483 to -119) *	-896	(-1537 to -255) *
Health outcomes				
Number of MACE per patient ^b	0.002	(-0.031 to 0.033)	0.004	(-0.030 to 0.035)
QALYs per patient ^c	-0.003	(-0.017 to 0.010)	-0.003	(-0.017 to 0.010)

* Each individual row cost was done as a regression model, and then combined amount is run as a model

Cost effectiveness scatterplot: incremental cost and MACE avoided (iFR vs FFR)

Limitations

- DEFINE FLAIR – non-inferiority study – therefore cost analysis focused on estimations rather hypothesis testing around superiority
- 12 month data – longer term outcomes / costs not yet reported
- Conservative estimates / costs used for medications procedures

Conclusions

- Coronary physiology strategy of iFR vs. FFR lead to similar clinical outcomes (DEFINE FLAIR – ACC17)
- When preferentially opting for an iFR-guided approach, an economic cost saving estimated \$896 per patient was achieved.
